Questi cavi si utilizzano per il controllo dei servomotori delle macchine utensili, in catene di montaggio, linee di produzione, ecc. tramite il segnale proveniente dall'encoder, resolver, tachimetrica. La schermatura è ottimizzata in modo da ridurre al minimo le interferenze elettromagnetiche provenienti dagli altri cavi e dalle apparecchiature elettroniche.

La miscela in poliuretano della guaina, la quale risponde ai requisiti richiesti dalle Norme UL e CSA, conferisce al cavo un'ottima resistenza all'abrasione ed una elevata resistenza agli oli ed agenti chimici in generale.

Sono idonei ad essere installati in catene portacavi con elevate prestazioni meccaniche. I cavi UNIDRALL 5100, previsti a catalogo, comprendono le tipologie più diffuse per applicazioni ai servomotori. Invitiamo ad interpellarci per ogni applicazione particolare.

Such cables are suitable for controlling of servomotors of tooling machines, assembly lines, production lines, ecc. by means signals coming from encoder, resolver, taco, etc. Screening is optimised in order to minimize electromagnetic interferences coming from other cables and electronic equipment. Polyurethane jacketing compound, which meets the relevant UL and CSA Standards, provides at cables very good abrasion resistance and very good oil and chemical agent resistance.

They are suitable to be installed into travelling chain with high dynamic performances. UNIDRALL 5100 cables, inserted into the catalogue, include the most common applications to servomotors. We invite you to consult us for every particular application.

DESINA Approved.
